

Hierarchic Dementia Scale–Revised (HDS-R) Train the Trainer workshop Melbourne, VIC

Presented by
Terrie Simpson, Occupational Therapist and Project Officer with
WA Dementia Training Study Centre (WADTSC)

Friday 26 June 2015

The WA Dementia Training Study Centre will be holding a full day training workshop on the Hierarchic Dementia Scale-Revised (HDS-R) in Mantra Bell City, 215 Bell Street, Preston, from 8.30am to 4.00pm on Friday 26 June 2015.

The Hierarchic Dementia Scale-Revised (HDS-R) is a cognitive assessment for people with dementia. It assesses 20 different cognitive functions and can be used from the point of diagnosis through to end of life care. It is particularly useful when combined with the Possibility Oriented Approach for creating person-centred care plans based, not only on a person's limitations, but taking into consideration their remaining strengths.

Registrations for this workshop are invited from health professionals working in acute, residential or community settings, particularly those responsible for assessing people with dementia and creating care plans.

Workshop objectives:

- Understand the underpinning theory of the HDS-R
- Demonstrate ability to assess people with dementia using the HDS-R
- Combine the results of HDS-R assessments with a Possibility Oriented Approach to provide person-centred interventions.
- Learn about the forthcoming HDS-R computer app.

If you are a health professional and would like to register for this training session, please follow this link to the [Eventarc registration site](#)
